

FOR CIOs, HEADS OF IT & IT OPERATIONS

Your AI Assistant Can Now Answer Questions About Your Own Company.

The Copilot, Claude, and Gemini your teams already use can answer almost anything — except questions about your own company: who works where, what device they hold, what frees up when someone leaves. That operational truth is scattered across 20-plus disconnected systems. **MCP Cortex changes what those same assistants can do** — giving the AI you already run a governed line of sight into it, so questions that used to take days of exports come back in one sentence.

- One organization-scoped graph of people, devices, software, services, and worksites — reconciled across **HRIS, identity, MDM, ITSM, SAM, telecom and more**
- Exposed to **Microsoft Copilot, Anthropic Claude, and Google Gemini** through the Model Context Protocol — no new tool to roll out
- Every answer is **scoped to the asker's role**, carries the systems it came from, and is recorded in the audit log

THE FOUR GAPS IT CLOSSES

 **AI can't see your operational world**
Your assistant answers from the public web — not the HR, ITSM, MDM, SAM, telecom, and asset systems that run your company.

 **Answers you can't act on**
General-purpose assistants guess. Cortex resolves every question against the graph and returns the same answer every time, with the sources behind it.

 **Cross-domain questions go unanswered**
"What does an employee have — and what frees up when they leave?" spans HR, MDM, SAM, and telecom — so teams export reports and reconcile in Excel.

 **No governance over what AI sees**
Without role-scoped access and an audit trail, exposing operational data to an assistant is a security and compliance exposure leadership can't sign off on.

IN PRODUCTION · FORTUNE 100
TECHNOLOGY

\$10M

CapEx deferred — automated device logistics and a performance-based (not time-based) refresh

Broadcom · 39 countries

"We didn't replace a single system. We declared the end state — and it ran on the stack we already had."

— VP of IT Operations · Fortune 15 enterprise

See your own operational questions answered in one sentence.

We'll connect a slice of your estate and show your assistant answering across it.

One Graph. Three Assistants. One Set of Answers.

MCP Cortex connects Microsoft Copilot, Claude, and Gemini to one reconciled graph — so a cross-domain question that would mean **three exports and a spreadsheet** comes back as a single answer, with the systems each fact came from.

Copilot · Claude · Gemini → **MCP Cortex** → Knowledge Graph · people, devices, software, comms, worksites, org

MCP Cortex · Knowledge Graph synced 2 hours ago

ASK MCP CORTEX
"Run an offboarding audit for the Sydney finance team — what's still assigned, and what frees up?"

Matched 8 employees in Finance · Sydney — releasing ≈\$420K in annualized run-rate spend across three domains:

ANNUAL SPEND FREED ≈\$420K across devices, software, and mobile lines	DEVICES 11 assets to recover — 8 laptops, 3 monitors	SOFTWARE 63 entitlements across 14 products to reclaim	COMMUNICATIONS 8 active mobile lines to deactivate
---	--	--	--

SOURCE LINEAGE — EVERY FACT TRACED TO ITS SYSTEM

HRIS ↓ People	MDM ↓ Devices	SAM ↓ Software	Telecom ↓ Comms
----------------------------	----------------------------	-----------------------------	------------------------------

Joined on the **Organization** entity · **returned in seconds** — the work that used to mean exports and Excel

Illustrative example — figures shown to demonstrate format, not a live result.

CONNECTS TO YOUR STACK

ServiceNow Workday Okta Microsoft Intune Flexera Tanium

Coupa Freshservice Carriers **+ 200 more**

200+ pre-built connectors across HRIS, identity, MDM, ITSM, SAM, procurement, telecom, ERP & vendors · 22 systems into one graph at a Fortune 250 · ~1 week to ingest, then continuously reconciled.

CERTIFIED & COMPLIANT

ISO 27001:2022 CERTIFIED Information Security	ISO 27018 CERTIFIED Cloud Privacy	ISO/IEC 42001:2023 CERTIFIED AI Management
SOC 2 Type II CERTIFIED Security & Availability	GDPR COMPLIANT Data Protection	

Not a BI platform, ITSM, or system of record. Cortex is the answer layer on your **operational truth** — the same continuously reconciled reality the XOPS **system of action** executes against. It reports state and tells you what to ticket. **Read-only today; action invocation sequenced for H1 2027.**
