

FOR CIOs & HEADS OF IT

# Your AI Assistant Can Now Answer Questions About Your Own Company.

The Copilot, Claude, and Gemini your teams already use can answer almost anything — except questions about your own company: who works where, what device they hold, what frees up when a business unit is sold. That operational truth is scattered across 20-plus disconnected systems. **MCP Cortex changes what those same assistants can do** — giving the AI you already run a governed line of sight into it, so questions that used to take days of exports come back in one sentence.

- One organization-scoped graph of people, devices, software, services, and worksites — reconciled across **HRIS, identity, MDM, ITSM, SAM, telecom and more**
- Exposed to **Microsoft Copilot, Anthropic Claude, and Google Gemini** through the Model Context Protocol — no new tool to roll out
- Every answer is **scoped to the asker's role**, carries the systems it came from, and is recorded in the audit log

## THE FOUR GAPS IT CLOSSES

-  **AI can't see your operational world**  
Your assistant answers from the public web — not the HR, ITSM, MDM, SAM, telecom, and asset systems that run your company.
-  **Answers you can't act on**  
General-purpose assistants guess. Cortex resolves every question against the graph and returns the same answer every time, with the sources behind it.
-  **Cross-domain questions go unanswered**  
"What transfers when we spin out a business unit?" spans HR, MDM, SAM, and procurement — so teams export reports and reconcile in Excel.
-  **No governance over what AI sees**  
Without role-scoped access and an audit trail, exposing operational data to an assistant is a security and compliance exposure leadership can't sign off on.

## BUILT FOR THE EVENTS THAT MOVE SPEND & RISK

- Separations & carve-outs
- M&A integration
- Reorganizations
- Audit & compliance
- Renewal & cost control

IN PRODUCTION · FORTUNE 250  
DIVESTITURE

# \$54B

carve-out carried on the knowledge graph  
Fortune 250 agriculture company

*"We didn't replace a single system. We declared the end state — and it ran on the stack we already had."*

— VP of IT Operations · Fortune 15 enterprise

**See your own operational questions answered in one sentence.**

We'll connect a slice of your estate and show your assistant answering across it.

# The Question That Delays Every Divestiture.

Spinning out a business unit forces the hardest questions in IT – the ones that span every system and would otherwise mean **months of manual reconciliation, and the errors that come with it.** Here, MCP Cortex answers one on the graph in seconds, evidenced to source.

Copilot · Claude · Gemini → **MCP Cortex** → Knowledge Graph · people, devices, software, comms, worksites, org

MCP Cortex · Knowledge Graph synced 2 hours ago

**ASK MCP CORTEX**

"We're spinning out Meridian's Specialty Nutrients division – what transfers with it, and what renewals and cost exposure land before year-end?"

**Matched 1,240 employees across Specialty Nutrients – surfacing ≈\$8.6M in renewals before year-end, plus devices, licenses, and real estate to release:**

<b>RENEWAL EXPOSURE</b> <b>≈\$8.6M</b> 23 vendor & telecom contracts due before December	<b>DEVICES</b> <b>1,180</b> assets transferring with the unit, by site	<b>SOFTWARE</b> <b>312</b> products; ≈\$2.1M reclaimable from overlap	<b>REAL ESTATE</b> <b>5 sites</b> leases to exit or consolidate – ≈\$3.4M/yr
--	--	---	--

**SOURCE LINEAGE – EVERY FACT TRACED TO ITS SYSTEM**

<b>HRIS</b> ↓ People	<b>MDM</b> ↓ Devices	<b>SAM</b> ↓ Software	<b>Procurement</b> ↓ Contracts	<b>Telecom</b> ↓ Comms	<b>Facilities</b> ↓ Worksites
----------------------------	----------------------------	-----------------------------	--------------------------------------	------------------------------	-------------------------------------

Joined on the **Organization** entity · **returned in seconds** – reconciliation that takes separation teams months by hand

*Illustrative example – Meridian AgriSciences is fictitious; company and figures shown to demonstrate format, not a live result.*

## CONNECTS TO YOUR STACK

ServiceNow    Workday    Okta    Microsoft Intune    Flexera    Tanium

Coupa    Freshservice    Carriers    + 200 more

200+ pre-built connectors across HRIS, identity, MDM, ITSM, SAM, procurement, telecom, ERP & vendors · 22 systems into one graph at a Fortune 250 · ~1 week to ingest, then continuously reconciled.

**CERTIFIED & COMPLIANT**

<b>ISO 27001:2022</b> CERTIFIED Information Security	<b>ISO 27018</b> CERTIFIED Cloud Privacy	<b>ISO/IEC 42001:2023</b> CERTIFIED AI Management
<b>SOC 2 Type II</b> CERTIFIED Security & Availability	<b>GDPR</b> COMPLIANT Data Protection	

Not a BI platform, ITSM, or system of record. Cortex reports state and tells you what to ticket. **Read-only today; action invocation sequenced for H1 2027.**
