

FOR CIOs, CLOUD & FINOPS LEADERS

See What's Actually True. Live in Weeks, Not Quarters.

Your operational truth is scattered across ITSM, HR, endpoint, SAM, and identity — each system sees part of the picture, none sees the whole, so teams reconcile by hand and decide on partial truth. The **XOPS Starter Kit** connects them into one continuously reconciled view of reality — **read-only: no write-back, no process change, no risk**. And it's on the AWS, Azure, and Google marketplaces, so you buy on paper you already have and go live in weeks.

- **Read-only by design** — connects to the systems you already run; no write-back, no process change, no risk
- **Procured like cloud** — transact on AWS, Azure, or Google Marketplace and draw it down against committed spend (EDP / MACC)
- **Live in weeks** — first insight in ~21 days for a 10,000-employee estate, not a multi-quarter rollout

WHAT THE STARTER KIT SURFACES

- **Operational Truth**
What actually exists vs what your systems say exists. Assets, users, and entitlements aligned across systems into one trusted view.
- 🔍 **Utilization Truth**
What's active vs what's idle. Unused licenses, dormant accounts, inactive devices, and underutilized assets surfaced across the estate.
- 😞 **Lifecycle Truth**
What should have happened vs what didn't. Onboarding, transfers, and offboarding events checked against actual system state.
- 🛡️ **Compliance Truth**
Audit gaps found before the audit. Assignments and entitlements validated continuously across every source.

How the Starter Kit knows what's real: for every asset it continuously reconciles four signals — **Installed** (what exists) · **Used** (what's active) · **Entitled** (what's allowed) · **Assigned** (what's been handed out). When they don't align, it flags the issue instantly — no report to run.

PROCURED LIKE CLOUD · LIVE IN WEEKS

~21 days
to first insight
10,000-employee org

Zero
write-back, process change, or risk

3
telemetry sources to start
200+ connectors available

Available on the AWS, Azure & Google marketplaces — buy on paper you already have, retire committed cloud spend, and consolidate it on one bill.

— Private offers available

See your own operational truth in a 15-minute working session.

Available now on AWS, Azure & Google Marketplace — no prep required.

Start with the Truth. Add Action When You're Ready.

The Starter Kit is the read-only foundation — one continuously reconciled view of reality you can **ask in plain language** and trust to source. It identifies what's wrong and where the risk is. When you're ready to act on it, the full **XOPS Platform** turns those answers into autonomous execution — on the same graph, with no re-platforming.

Every system tells part of the story. The Starter Kit **tells the whole story — read-only; the XOPS Platform acts on it.**

XOPS Starter Kit · Knowledge Graph read-only · synced 2 hours ago

ASK THE STARTER KIT
"Where don't our systems agree — and what's actually true?"

Reconciled Installed · Used · Entitled · Assigned across every source and surfaced where they disagree — the truth no single system can see:

ACCESS AFTER OFFBOARDING 260 still live in identity, gone from HR	IN ENDPOINT, NOWHERE ELSE 1,400 devices unknown to CMDB & HR	ENTITLED, NEVER USED 4,300 licenses assigned, zero activity	INSTALLED, NOT ENTITLED 540 software with no matching license
---------------------------------------------------------------------------------------	----------------------------------------------------------------------------------	---------------------------------------------------------------------------------	-----------------------------------------------------------------------------------

SOURCE LINEAGE — EVERY FACT TRACED TO ITS SYSTEM

HRIS ↓ People	Identity ↓ Access	Endpoint ↓ Devices	SAM ↓ Licenses	MDM ↓ Config	ITSM ↓ State
----------------------------	--------------------------------	---------------------------------	-----------------------------	---------------------------	---------------------------

Joined across **HR, identity, endpoint, SAM & ITSM** · returned in seconds — read-only, no write-back

Illustrative example — figures shown to demonstrate the Starter Kit, not a live result.

CONNECTS TO YOUR STACK

ServiceNow Workday Okta Microsoft Intune Flexera Tanium

Nextthink **+ 200 more**

Includes 3 integrations / telemetry sources by default; 200+ connectors available across ITSM, identity, endpoint, SAM, HR & more · read-only · ~1 week to ingest. When you're ready to act, the XOPS Platform executes on the same graph — no re-platforming.

CERTIFIED & COMPLIANT

ISO 27001:2022 CERTIFIED Information Security	ISO 27018 CERTIFIED Cloud Privacy	ISO/IEC 42001:2023 CERTIFIED AI Management
SOC 2 Type II CERTIFIED Security & Availability	GDPR COMPLIANT Data Protection	

Not a BI dashboard or another system of record. The Starter Kit is **read-only operational truth** — the fastest, lowest-risk way to see what's real, and the on-ramp to the XOPS **system of action**.
